

Postdoctoral position in drug discovery

An opening is available in the drug discovery laboratory of Dr. Stephen Fesik for a post-doc in the field of protein x-ray crystallography. Responsibilities will include protein expression and purification, and all aspects of x-ray crystallography including preparation of protein-inhibitor complexes, crystallization, home/synchrotron data collection, and structure determination. Additional experiences in molecular biology including construct design, cloning, site-directed mutagenesis, and experience with recombinant protein expression in eukaryotic cells are highly preferred. The ideal candidate should be self-motivated and be able to communicate efficiently in a highly collaborative environment. Please send cv to jason.phan@Vanderbilt.Edu
