About the ACA

The American Crystallographic Association (ACA) was founded in 1949 through a merger of the American Society for X-Ray and Electron Diffraction (ASXRED) and the Crystallographic Society of America (CSA). The objective of the ACA is to promote interactions among scientists who study the structure of matter at atomic (or near atomic) resolution. These interactions will advance experimental and computational aspects of crystallography and diffraction. They will also promote the study of the arrangements of atoms and molecules in matter and the nature of the forces that both control and result from them.

Membership in the ACA is open to any person who is actively interested in the purposes of the Association and whose application is approved by the ACA Council or its designee. All members are entitled to voting privileges. Student members are very welcome and their contributions to the life and vigor of the association has always been important. The benefits of membership are the same in all categories. These include: voting privileges, RefleXions, the ACA newsletter that is published 4 times per year, complimentary subscription to the Newsletter of the International Union of Crystallography, and Physics Today, a monthly publication of AIP, and reduced rates for the International Tables for X-Ray Crystallography, Structure Reports, Journal of Applied Crystallography, and Acta Crystallographica when purchased for the member's personal use only. The ACA is a member society of the American Institute of Physics (AIP) and an Affiliate Member of the International Union of Crystallography.

The total membership of the ACA is about 1,600. National meetings are held annually. There are 12 Scientific Interest Groups (SIG's) concerned with Biological Macromolecules, Fiber Diffraction, General Interest, Industrial, Materials Science, Neutron Scattering, Powder Diffraction, Service Crystallography, Small Angle Scattering, Small Molecules, Synchrotron Radiation and Young Scientists. Members may join as many of these groups that are of interest to them. Each SIG is responsible for organizing sessions at Annual Meetings at least every other year.

The headquarters of the association is located at Hauptman Woodward Medical Research Institute, 700 Ellicott St., Buffalo, NY 14203.

WK.02 Grazing Incidence SAXS Theory and Data Analysis

Alex Hexemer, Chenhui Zhu, presiding
Dona Ana

Funding for this workshop provided, in part by, Anton Paar, Dectris, Rigaku Americas

GISAXS is a unique method for characterizing the nanostructural features of materials, particularly at surfaces and interfaces, which would otherwise be impossible using traditional transmission-based scattering techniques [1]. It is a surface-sensitive tool for probing simultaneously the sample morphology both in-plane and out-of-plane, and is being increasingly utilized to measure the size, shape and spatial organization of nanoscale objects located on top of surfaces or embedded in mono- or multi-layered thin-film materials. Individual GISAXS images serve as static snapshots of nanoscale structure, while successive images provide a means to monitor and probe dynamical processes, including self-assembly or other reorganization events, which occur at nanometer length scales.

Invited Speakers:

Elaine Chan, Advanced Light Source, Lawrence Berkeley National Laboratory

Walter Van Herck, Jülich Centre for Neutron Science JCNS, Germany

Alex Hexemer, Advanced Light Source, Lawrence Berkeley National Laboratory

Zhang Jiang, Advanced Photon Source, Argonne National Laboratory

Joseph Strzalka, Advanced Photon Source, Argonne National Laboratory

Kevin Yager, National Synchrotron Light Source / Center for Functional Nanomaterials, Brookhaven National Laboratory

WK.03 Reciprocal Space Visualization - MAX3D

**Jim Britten, presiding
Cimmareon**

The workshop will open with a discussion of reciprocal space and a description of how the all of the information on an area detector frame (not just Bragg spots) maps into RS. We will look at examples of “single crystal” diffraction showing crystal quality, protein diffraction, twinning, incommensurate scattering, diffuse scattering, quasicrystal diffraction. We will briefly discuss the origins of various scattering features. We will discuss how scanning strategies can be viewed and optimized to observe targeted diffraction features.

2014 Margaret C. Etter Student Lecturer Awards

Each Scientific Interest Group (SIG) has the opportunity to select one student to receive an award and to present a lecture in one of the sessions organized by that SIG. Selections are based upon submitted abstracts and are independent of whether the student originally requested an oral or poster presentation. Award winners are determined by the elected officers of the SIG. Students who are selected receive a monetary award of \$250 and a certificate to be presented at the beginning of their lecture.

Pauling Poster Prize, Canadian and IUCr Poster Prize

The Pauling Poster Prize established by the ACA and is supported by member contributions, to honor Linus Pauling. Pauling was one of the pioneers in American structural research and was very supportive of the ACA. At each annual meeting, the five best graduate or undergraduate poster presentations receive Pauling awards. Each award consists of \$250, a complimentary banquet ticket, and a copy of a Linus Pauling book. An additional Pauling Prize sponsored by the Canadian Div. of the ACA and the Canadian National Committee of the IUCr, will be given to the highest ranked graduate or undergraduate poster from a Canadian laboratory.

IUCr Poster Prize

The IUCr Executive Committee is pleased to continue a series of IUCr awards presented at meetings of the regional affiliates and national crystallographic associations. The award is complimentary online access to all IUCr journals for one year or a complimentary volume of International Tables or other IUCr publication.

Journal of Chemical Crystallography Poster Prize

The best graduate or undergraduate poster presentation in the area of chemical crystallography or small molecule structure determination and analysis is sponsored by Springer's Journal of

Chemical Crystallography www.springer.com. The winner will receive their personal choice of books from Springer's extensive portfolio of titles.

Journal on Structural Dynamics Poster Prize

The prize of \$250 is given for excellence in research on structural determination and dynamics of sys-

tems, enabled by the emerging new instruments (e.g. XFELs, electron sources, etc.) and new experimental and theoretical methodologies and is open to students (graduate and undergraduate) and post-docs.

RCSB Protein Data Bank Poster Prize

This prize recognizes a student poster presentation involving macromolecular crystallography. The award will be 2 educational books that will be mailed to the winner after the meeting. An announcement will appear on the RCSB PDB website and newsletter.

CrystEngComm Poster Prize

CrystEngComm (published by the Royal Society of Chemistry) is very pleased to sponsor a prize to be awarded to the best graduate or undergraduate poster presentation in the area of crystal engineering/supramolecular chemistry. The winner will receive an RSC book voucher and an announcement will be posted on the CrystEngComm website (www.rsc.org/Publishing/Journals/CE/about.asp) shortly after the conclusion of the meeting.

Oxford Cryosystems Low Temperature Poster Prize

This prize is open to all participants and is awarded to the best poster describing work in low temperature crystallography. The winner will receive a cash prize donated by Oxford Cryosystems, Inc.

Taylor & Francis Biomolecular Crystallography Poster Prize

This prize is open to all participants and is awarded to the best poster describing a successful application of a non-routine or computationally challenging structure solution and refinement technique in biomolecular crystallography.

The winner will receive Bernhard Rupp's book Biomolecular Crystallography donated by the Taylor & Francis Group and will be announced at the banquet on Wednesday.
